

WATER CONSERVATION POLICY

At Valluvar College of Science and Management, we are committed to promote sustainable water management practices through our operations, teaching and community engagement to protect precious water resources for future generations. It is designed to manage water sustainably to meet current and future demands. Our goal is to ensure the efficient use of water resources while protecting the quality of life for our students, staff and the wider community.

Institutional Initiatives

- The college strives to minimize water consumption by implementing efficient water management practices, such as installing water-efficient fixtures, repairing leaks promptly and reducing unnecessary water use.
- The college provides education and training to the students, staff and the community about the importance of water conservation and the need for sustainable water management practices.
- Plantations inside the campus are based on Drip Irrigation and G. Nammazhvar's Irumadi paathi and Vatta paathi method, ensuring less consumption of water.
- A rainwater harvesting pond is installed to capture and store rainwater for reusing.
- The college has a sewage treatment plant to treat and recycle the reuse the water for crop cultivation.
- The college has planted low-absorbent plants to minimize water consumption for landscaping and outdoor areas.
- PUSH UP taps are used inside the college and hostel to reduce unnecessary use of water.
